

SILENCER

GLOBAL TRUSS SILENCER

Keep it simple! Global Truss has developed the Silencer, a rubber damper that is simply pushed on to the end of a truss pin to reduce noise when assembling truss structures. The silencer will decrease the volume when hammering truss pins by around 50% whilst dampening the high pitch frequencies significantly. A special rubber blend is being used in production which makes the Silencer flexible yet hard enough to transfer the force of the hammer effectively, and whilst preserving the material of the pin and the copper hammer. The Silencer has been designed to be left on the truss pins, whilst fitted to the truss, providing protection not only to the truss but also the ground it is sitting upon. Another added feature is that it offers added camouflage when silvers pins are used on black truss.

TECHNICAL DATA

- » Ø: 17 mm
- » Height: 10 mm
- » Weight: 3 g
- » Material: NR/SBR 75
- » Color: black
- » Compatible: Standard truss pin

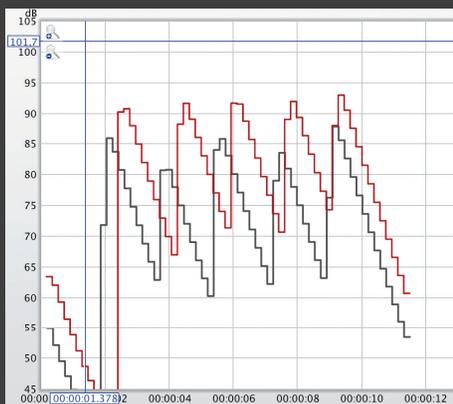

FUNCTIONS

- » REDUCES NOISE BY HALF
- » PROTECTS YOUR HEARING
- » PROTECTION OF SURFACES & MATERIAL
- » EASY TO HANDLE
- » COMPATIBLE WITH EVERY STANDARD PIN

SILENCER IN ACTION

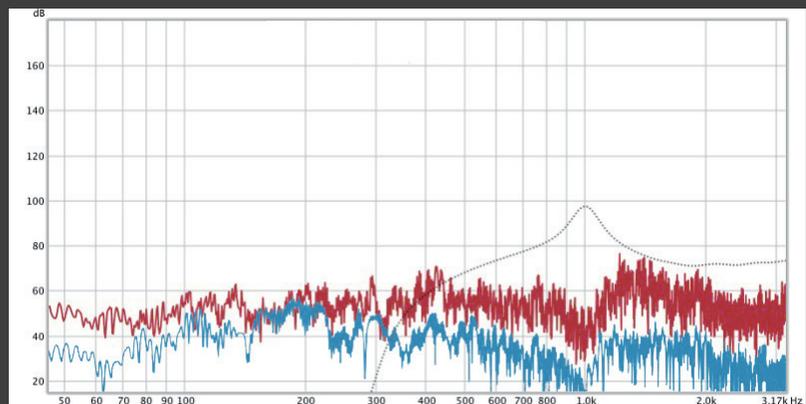

VOLUME

Red = Without Silencer / Black = With Silencer

FREQUENCY SPECTRUM

Red = Without Silencer / Blue = With Silencer
