

Batt-O-Meter: The First Battery Tester for Musicians

Boost sales with this essential accessory for anyone with battery operated music gear!

Not since the electronic tuner has there been a new product so necessary for musicians who depend on any battery - 9 volt, AA, AAA, etc. - in order to practice their trade.

Before you finalize a sales transaction for battery-operated products (active guitars, basses, stompboxes, tuners, etc.), remind your customer that the Batt-O-Meter saves them time, money and the environment by running each battery for its maximum life. Reduce stress by knowing whether a battery will die before the end of a performance.

All distribution outside the U.S. is handled by:

Stop Tongue Testing Batteries

Batt-O-Meter™ lets you check batteries inside effects boxes and active instruments without having to remove them. Plug the Power Probe into any 1/4" jack to read the remaining hours of life and voltage. This device also checks the 1.5V and 9V batteries rolling around your gig bag.

"Too many times I've stepped onstage wondering... if the battery's going to run out in the middle of a set. With the Batt-O-Meter, I can put my fears to rest and know exactly how much time I've got left." — KYLEE SWENSON,
LOQUAT SINGER/GUITARIST AND EQ MAGAZINE EDITOR

Fast, accurate, and easy to use, the Batt-O-Meter:

- Saves you from risk and stress during a performance
- Saves time by allowing you to check battery life WITHOUT taking gear apart
- Saves the environment by reducing the number of discarded batteries
- Saves you money by extending the usage of each battery

Stop wasting. Stop guessing. KNOW when to change batteries with the Batt-O-Meter, the world's first battery tester for musicians.
