

Keyboard Stand 18880

collapsible

Instructions for Use

Warning:

Mount the side parts **7** at the same height - keyboard needs to be fully horizontal. Tighten all screws securely.

How to Set Up:

Pull the side parts **7** apart as far as they go and secure them with the locking screw **8**. Use the bolts **9** (M6 x 50 mm), washers **10** and locking nuts **11** to fasten the connecting brace **12** to the top of the side parts (**Fig. A**) and tighten it (**Fig. B**).

Press in the plastic end caps **13** and stick the rubber pads **14** onto the support arms.

Height-adjustment (12-way):

Remove end caps **2** and loosen locking parts (nuts **3**, washers **4**, bolts **5**, **6**). For the desired height insert the 4 bolts **5**, **6** in the same hole on each base part **1**.

Attention: Insert the hexagon bolts in the round holes, the square neck carriage bolts in the square holes.

Stick the side parts **7** onto the base parts **1** until they hit the bolts (**Fig. C**) and tighten with washers **4** and nuts **3**. Press in the end caps **2**.

To fold up the stand:

Loosen the locking nuts **11**, fold out the connecting brace **12** and retighten the locking nuts **11**. Loosen the locking screw **8** and push the side parts **7** together. Secure with the locking screw **8**.

Important Information:

If you place the stand inside your house, it may be advisable to put a non-sliding pad under the stand's rubber end caps as they could leave marks on sensitive floors, for example parquet flooring.
