

Monitor Stand 26740

adjustable height

How to Set up the Stand

- Arrange cast-iron round base **1** with the felt pads underneath.
- Screw main tube **2** with M20 thread in the round base.

Adjusting the Height

- For height-adjustment insert locking screw **3** through loop of safety cord **8** into clamping element **4**.
- Extend upper rod **10** to desired height and push safety pin **9** through provided tube slot and tighten locking screw **3**.
- To turn the monitor, do not turn the support plate **11**, but rather loosen locking screw **3** and turn the extension tube in the direction desired.
- Finally, retighten locking screw **3**.

Supports for Monitor

- A choice of four brass nibs **7** or four rubber nubs **12** can be used.
- Brass nibs: Run the thread through the holes from the top (as desired, the four inner ones or the four outer ones), and screw tight to the bearing plate using washer **6** and locking nut **5**.
- Rubber nubs: Self-adhesive; remove protective film and stick to the position on the plate desired.

Safety Information

- Handle cast-iron base **1** with caution, and in particular do not drop when carrying out the assembly.
- Be sure the screws are tight.
- The safety pin **9** always has to be installed.
- Remove the monitor before adjusting the height.
- The brass nibs (**7**) present the risk of injury without a monitor. When not in use, detach them or take protective measures.
- The stand may only be used on even surfaces.
