

The DrumBox Travel set is designed to allow storage of the pedal inside of the cajon. First of all remove the back panel by unfastening the 6 wing nuts placed around it.

Remove the beater post by unfastening the clamp with the drum key that comes attached.

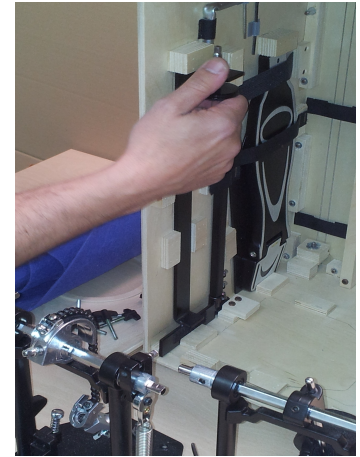

Remove the double sided velcro that unites the beater bar to the pedal chain, which function is to prevent any of those pieces to wander randomly and cause damage inside of the instrument.

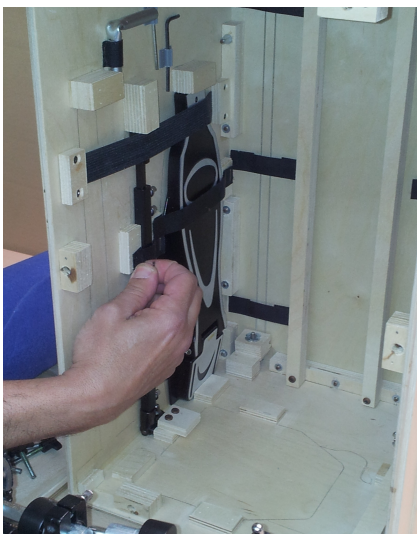

When removing or placing the beater post always keep it at an angle to ease the movement.

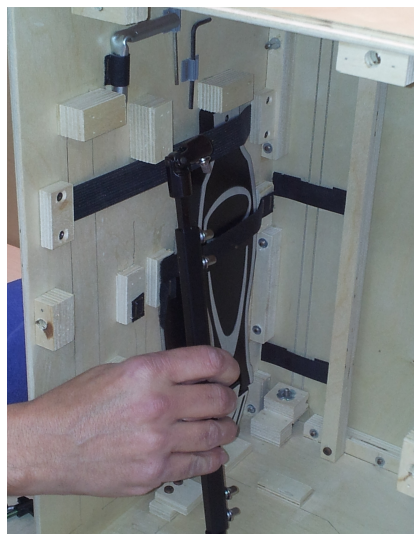

Remove the other post.

Now remove the other parts, starting from the bottom clamp.

Then remove the transmission bracket.

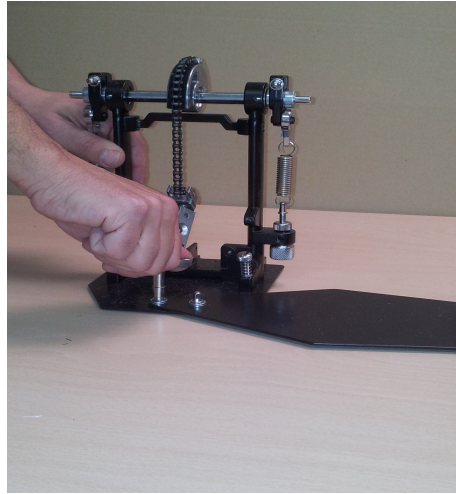

The transmission bracket has compulsory positioning, with the thinner part facing upwards, and the tightening bolts towards the front panel.

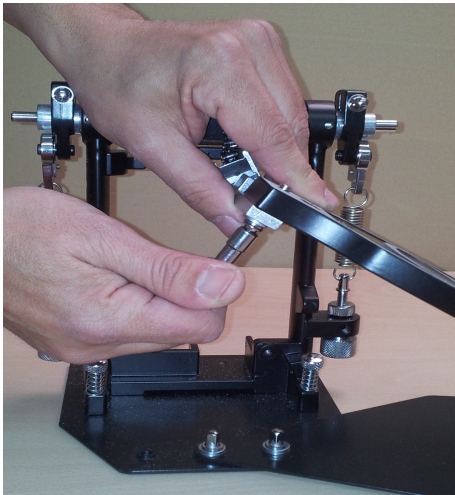

Finally, remove the foot platform.

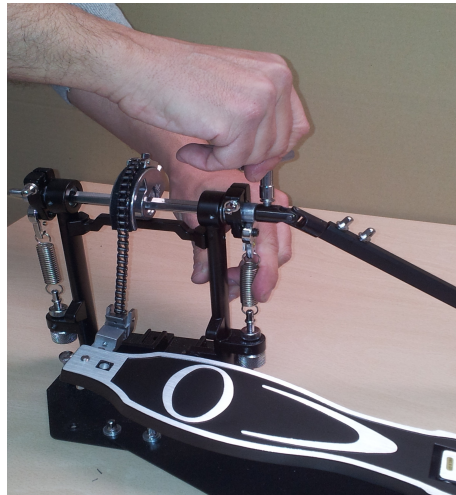

Join the foot platform to the chain post, if you are right footed the post shall be placed at the right side to the foot platform if you are left footed then it's the opposite way.

Join the chain to the foot platform, using the last hole from the chain.

Fasten its bolt.

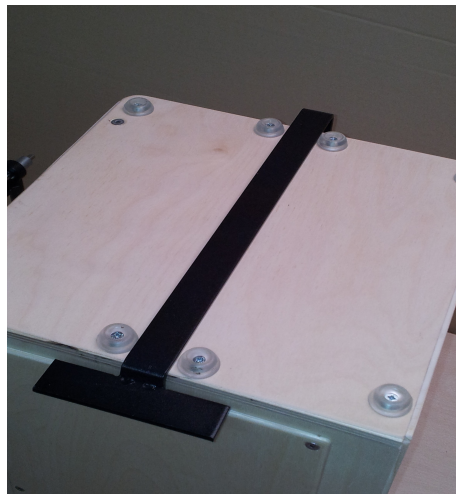

Position the transmission bracket onto the chain post.

Do the same for the beater post.

Join the beater post to the bottom clamp.

Place the cajon onto the bottom clamp, making sure it is caught between the four rubber guides.

Use the anti slip rug to keep it all stable.
