

## 2x2 CONTROLS

In 2x2, you have two song parts each with two parallel tracks, for a total of four unique tracks.

### PLAY/STOP ALL

#### SINGLE TAP:

- Stop playback of all tracks
- Resume playback of all tracks

#### DOUBLE TAP:

- Immediately stop playback of all tracks

#### HOLD (when stopped) :

- Delete everything and start the song over

### VOLUME WHEEL

Use the volume wheel to control the master output volume at any time.

The thin bars on the right show the L and R input volume levels. If the bars are red you are clipping and you should lower the volume of your instrument.

**In the Mixer:** You can use the volume wheel to control the relative volume levels of each track.

**On-screen label text** describes the SINGLE TAP commands of the bottom three buttons

### Waveforms

	Currently recording new track
	Currently selected layer
	Layer is not selected
	Currently recording
	Muted track
	Layer is undone. Undone layer can be brought back or overwritten

### NEXT PART

#### SINGLE TAP:

- Change between song parts

#### HOLD:

- Open the Mixer

### BOTTOM TRACK (middle) & TOP TRACK (right)

#### SINGLE TAP:

- Record (if track is blank)
- Playback recording
- Overdub
- Playback overdub

#### DOUBLE TAP:

- Mute
  - Single tap to unmute

#### HOLD:

- Undo most recent layer
  - Continue to hold: undo 2nd layer
  - If all layers undone: single tap to overwrite track
- Redo most recent layer
  - Continue to hold: redo overdub

**Overdubs:** You can have unlimited overdubs, but each new overdub will merge the previous overdub to the base layer. So you can have at most two layers per track -- your base layer and your most recent overdub layer. For each track, the most recent overdub is merged with the base layer when the song is saved. This frees up internal memory.

## 6x6 CONTROLS

In 6x6, you have six song parts each with six parallel tracks, for a total of 36 unique tracks.

### PLAY/STOP ALL

#### SINGLE TAP:

- Stop playback of all tracks
- Resume playback of all tracks

#### DOUBLE TAP:

- Immediately stop playback of all tracks

#### HOLD (when stopped) :

- Delete everything and start the song over

### VOLUME WHEEL

Use the volume wheel to control the master output volume at any time.

The thin bars on the right show the L and R input volume levels. If the bars are red you are clipping and you should lower the volume of your instrument.

**In the Mixer:** You can use the volume wheel to control the relative volume levels of each track.

On-screen label text describes the SINGLE TAP commands of the bottom three buttons
