

Installation Instruction for Shadow SH 3001 Violin-Transducer

Content:

Pickup with 3.5m cable and 6.3mm jack,
bonding material,
cable holder

1. Apply an even layer of adhesive to the underside of the pickup.
2. Press the pickup cautiously on the violin bridge.
3. To avoid cable noises, use the enclosed clip to secure the cable . Do not bend the cable too tightly to avoid damage to the pickup.
4. Connect to an appropriate amplifier.

Note:

Piezo pickups and transducers have a very high output impedance. In order to get the optimum sound output we recommend an amplifier with low impedance.
