

# Electra Vs 4

The **sandberg** family is getting a new member! Selected components made by leading manufacturers from all over the world unite in the **sandberg** headquarters to create the latest family member, the ELECTRA. From design and development to technical realization the ELECTRA is 100% german precision work.

Wood, routing and varnish works take place somewhere else but assembling and quality control is still done at **sandberg** in braunschweig/germany where our highly skilled workers give life and soul to the "beauties from far east"... Through regular visits we are in steady contact with our selected suppliers. All externally made parts and production steps are under our permanent and strict quality control.
