

RMI Acouswitch IQ DI

von Ruppert Musical Instruments SA (RMI)
from 2012-05-01

This multitool for acoustic musicians is a high-end preamp in a 2-channel design, featuring an A/B switch, a switchable parallel FX loop, a tuner mute function and DI out, which is isolated by a Lehle transformer. As a special feature it has a Body Contour control to fit into every musical environment, on the one hand a very slim notchfilter to eliminate feedback within a frequency range of 45 Hz - 500 Hz, on the other hand turning into the opposite direction it offers a broadband boost of low to low-mid frequencies to make the sound fatter or to make small speakers sound bigger.

The RMI Acouswitch IQ DI offers the following features:

- Lehle True Sound Technology
- A/B input switcher with mix function for both channels simultaneously
- studiodgrade preamp
- 3 band EQ with semi-parametric mids from 100 Hz to 6 kHz
- Body Contour control works as a notchfilter or a variable low mid boost
- switchable blend/mix FX Loop
- switchable FX loop can also be used as solo booster
- non-switchable serial effect loop
- studiodgrade D.I. box featuring pad, pre/post and groundlift switching and a Lehle LTMZ transformer for optimal galvanic isolation
- accepts all power supplies from 9 to 20 Volt AC or DC
- additional tuner out
- mute switch
- extremely robust construction with protected pots
