

# CONCERT 88

UHF Wireless Systems

PRODUCT INFORMATION

2013

Samson's Concert 88 UHF Wireless Systems provide high performance wireless solutions for a variety of performance applications where the freedom of mobility is a must. Available in handheld, headset, lavalier and guitar configurations, Concert 88 systems are perfect for musicians, business professionals, fitness instructors, educators and others looking for stunning sound and versatility without wires.

The frequency-agile Concert 88 system allows for up to 16 systems to be used simultaneously across two frequency bands (eight channels per band) within a 300-foot operating range between its receivers and transmitters. At the core of the system is the CR88 half-rack receiver. Featuring a true-diversity, dual IF design, the CR88 minimizes signal dropouts during performance. If a dropout does occur, the CR88's tone key and auto mute functions eliminate any background noise until the signal is restored.

Continuing with the CR88, the receiver's front panel provides a Select button for syncing receiver and transmitter channels via an infrared signal. The panel also features a channel LED, volume knob, Power button, two tuned antennas, as well as IR, Audio and Ready indicators, for optimal functionality and monitoring.

The Concert 88 system is available with four different transmitter configurations: Concert 88 Handheld with CH88 handheld microphone transmitter, Concert 88 Fitness with CB88 beltpack transmitter and HS5 headset microphone, Concert 88 Presentation with CB88 beltpack transmitter LM5 lavalier microphone and Concert 88 Guitar with CB88 beltpack transmitter and GC32 guitar cable. Each transmitter, which can operate for up to 12 hours on two AA batteries, is engineered to the finest detail to provide the ultimate in sound reproduction in its given application.

With Samson's Concert 88 UHF Wireless Systems, advanced technology and total versatility combine to provide high quality wireless performance wherever you need it.

## FEATURES

- High performance professional UHF wireless system
- Available in guitar, handheld, headset and lavalier configurations
- True diversity, dual-IF design minimizes dropouts
- 300-foot operating range
- Infrared set links the receiver and transmitter channels
- Up to 16 systems can be used simultaneously across two frequency bands (eight channels per band)
- Tone key and auto mute functions eliminate background noise during dropouts
- Transmitter offers over 12 hours of battery life using two AA batteries
- Rack mount kit included
