

Type 07 // Product Sheet

The Type 07 is much more than a classical nearfield-monitor. It creates a degree of sonic stability, spatiality, and transparency that makes it sound much bigger and more mature than its moderate size and sleek design make it appear. It features 2×100W ICEpower® amps, a newly designed, rock-solid woofer and an improved Air Motion Transformer for a natural and accurate high-frequency reproduction. It is precisely for these reasons that there is hardly a field of audio production, which the Type 07 is not ideally suited for: its clever design makes it an especially good player in broadcasting contexts as well as in recording and mix-down studios.

The Type 07 comes, like every HEDD speaker, with XLR and RCA connections. In addition, it also features a free card slot that allows for a wider range of digital functionality. HEDD currently offers optional cards for Dante, Ravenna / AES67 (Audio-over-IP!), AES3/EBU and USB2 integration.

Series ONE
Type 07
Nearfield Studio Monitor

FEATURES

- Frequency response: 38Hz – 50kHz (Crossover: 2300Hz)
- 2 x 100W ICEpower® amps from Denmark (Max. SPL: ≥116dB)
- XLR & RCA inputs
- HEDD Bridge modular inputcard-system for digital connectivity (USB2, AES3, Dante / AES67!)
- Solid unibody-like cabinet with a modern matt-black rubber finish
- Input- and Tweeter-Gain potentiometers (-10dB – +6dB / ±4dB)
- High (±4dB at 20kHz) and Low (±4dB at 50Hz) shelf controls
- Universal Mains (85V – 265V)
- W: 220mm x H: 300mm x D: 370mm
- Weight: 9.8kg
- Made in Germany
