

Zaor[®]

Monitor Stand

Technical Specifications

Monitor Stand:

When you are looking for a pair of solid, well built and nice looking speaker stands you are faced with little choice or very high price points and most of all, a great lack of flexibility: Most constructions have a fixed height. This is why ZAOR, who are dedicated to finding unique solutions, has come up with a nice range of adjustable speaker stands.

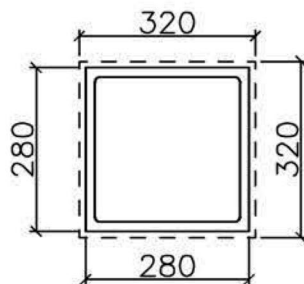

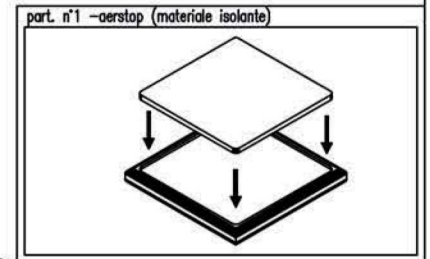

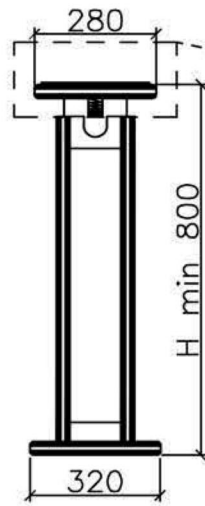

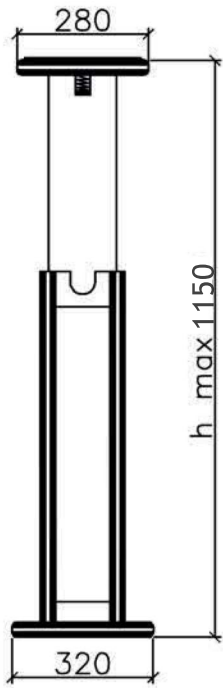

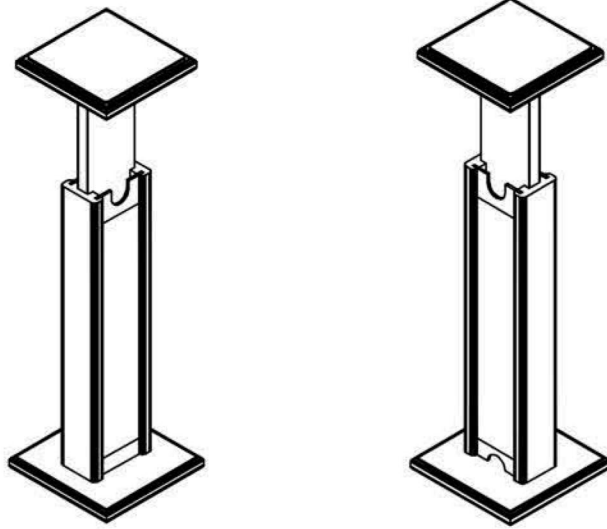

Specifications:

- Height: 800 - 1150 mm
- Top: 280 x 280 mm
- Bottom: 320 x 320 mm
- Adjustable in height
- AERstop pad
- Solid wood + plywood

ZAOR speaker stands are made from solid wood and plywood, which has practically no self resonance, plus they come as a standard with Aerstop coating which isolates the speaker from the stand to a large proportion. The Stand monitor is available in 6 colours. They are adjustable in height and feature screw in brass feet to re-adjust when the floor is not perfectly even.
